Exercise Test · 40 marks · 60 min

Real Numbers — Ex 1.1

16 Aug 2026

SECTION B — SHORT RESPONSE (20 × 2)**1. Name the property**

(i) : $a + \sqrt{2} = \sqrt{2} + a$

(iii) : $(a+2) + \sqrt{2} = a + (2+\sqrt{2})$

(v) : $(\sqrt{\frac{2}{3}}) \times 1 = \sqrt{\frac{2}{3}}$

(ii) : $4 \times \sqrt{11} = \sqrt{11} \times 4$

(iv) : $a - a = 0$

(vi) : $(6.2) \times \frac{1}{6.2} = 1$

2. Which property is used

(i) : $-6 < 5 \Rightarrow 0 < 11$

(iii) : $8 < 10 \Rightarrow -24 > -30$

(v) : $x = y \Rightarrow x + z = y + z$

(ii) : $7 > 3 \Rightarrow \frac{1}{3} > \frac{1}{7}$

(iv) : $x + z = y + z \Rightarrow x = y$

(vi) : $3x = 3y \Rightarrow x = y$

3. Verify

(i) : $\frac{a}{b} + \frac{c}{d} = \frac{ad+bc}{bd}$

(iii) : $\frac{4+36}{4} = 10$

(ii) : $\frac{3}{4} - \frac{1}{2} = \frac{1}{4}$

(iv) : $5(\frac{3}{4} + \frac{1}{4}) = 5$

4. Verify

(i) : If $3 < 5$ then $-15 > -25$

(iii) : $\frac{4}{5} + 3 > \frac{1}{5}$ then $\frac{4}{5} > \frac{1}{5}$

(ii) : If $4 < 5$ then $\frac{1}{4} > \frac{1}{5}$

(iv) : If $25 > 20$ then $-5 < -4$
